

Express Scripts Canada – Units of Measure Updates (Package Size)

Reference Guide

Certain DINs/PINs require the use of updated units of measure to determine the appropriate **package size** on a claim submission. Units of measure vary depending on the adjudication system and province.

Consider the following scenarios for DIN 02236974 in the Express Scripts Canada (ESC) adjudication system:

Scenario 1 – Previous (prior to the update)			
PROVINCE	MEDICATION NAME	UNIT OF MEASURE	DIN/PIN
ON	ALESSE 21 TABLET	PACK	02236974
	<ul style="list-style-type: none"> The unit of measure for this medication is pack If 1 pack of this medication is dispensed, the quantity field is populated with the following value: 1 		
Scenario 2 – Current (following the update)			
PROVINCE	MEDICATION NAME	UNIT OF MEASURE	DIN/PIN
ON	ALESSE 21 TABLET	TABLET	02236974
	<ul style="list-style-type: none"> The unit of measure for this medication is tablet If 1 pack of this medication is dispensed, the quantity field is populated with the following value: 21 		

Prior to implementation, ESC endeavors to distribute communications informing pharmacy providers and software vendors of upcoming *unit of measure* updates in the ESC adjudication system. Where applicable, software vendors can ensure that the pharmacist’s information system is updated to facilitate appropriate package size determinations.

Appendix A (below) serves as a list of past *unit of measure* updates in the ESC adjudication system. Each time, ESC distributes communications informing pharmacy providers of *unit of measure* updates, this list will be updated accordingly.

Note: This is not applicable to the Non-Insured Health Benefits (NIHB) program. This list may be updated at any time.
